TOHO Electronics Inc.

TTM-000 Series

V1.4.3 or higher

Serial Driver

Supported version TOP Design Studio

CONTENTS

We want to thank our customers who use the Touch Operation Panel.

1. System configuration Page 2

Describes the devices required for connection, the setting of each device, cables, and configurable systems.

2. External device selection Page 3

Select a TOP model and an external device.

3. TOP communication setting Page 4

Describes how to set the TOP communication.

4. External device setting Page 9

Describes how to set up communication for external devices.

5. Cable table

Page 10

Describes the cable specifications required for connection.

6. Supported addresses

Page 11

Refer to this section to check the addresses which can communicate with an external device.

1. System configuration

The system configuration of TOP and "TOHO Electronics Inc. - TTM-000 Series" is as follows.

Series	Model name	Interface	Communication method	Communication setting	Cable
TTM-000	TTM-002 TTM-004 TTM-005 TTM-006 TTM-007 TTM-009	Serial	RS-485 (2 wire)	<u>3. TOP</u> communication <u>setting</u> 4. External device <u>setting</u>	<u>5. Cable table</u>

■ Connection configuration

• 1:1 (one TOP and one external device) connection

• 1:N (one TOP and multiple external devices) connection

2. External device selection

■ Select a TOP model and a port, and then select an external device.

		Please check the system configuration in Chapter 1 to see if the external device you want to connect is a model whose system can be configured.		

3. TOP communication setting

The communication can be set in TOP Design Studio or TOP main menu. The communication should be set in the same way as that of the external device.

3.1 Communication setting in TOP Design Studio

(1) Communication interface setting

- [Project > Project properties > TOP settings] → [Project option > Check "Use HMI settings" > Edit > Serial]
 - Set the TOP communication interface in TOP Design Studio.

Items	ТОР	External device	Remarks
Signal Level (port)	RS-485	RS-485	Fixed
Baud Rate	9600		
Data Bit	8		
Stop Bit	2		
Parity Bit	None.		

* The above settings are examples recommended by the company.

Items	Description
Signal Level	Select the serial communication method between the TOP and an external device.
Baud Rate	Select the serial communication speed between the TOP and an external device.
Data Bit	Select the serial communication data bit between the TOP and an external device.
Stop Bit	Select the serial communication stop bit between the TOP and an external device.
Parity Bit	Select the serial communication parity bit check method between the TOP and an external device.

(2) Communication option setting

- [Project > Project properties > PLC settings > COM1 > "PLC1 : TTM-000 Series"]
 - Set the options of the communication driver of TTM-000 Series in TOP Design Studio.

Project Option			×
Change HMI[H] Keel Add F	C [A] TIT Change PLC[C]	Delete PLC[D]	
 TOP Setting TOP Setting SYS : RD 1520X Option Module Setting FieldBus (0) RFID (0) Device Setting COM1 (1) COM2 (0) COM3 (0) Ethernet (0) Wireless (0) USBDevice (0) 	PLC Setting[TTM-000 Series] Alias Name : PLC1 Interface : Serial Protocol : TOHO Protocol String Save Mode : First LH HL Use Redundancy Operate Condition : AND Change Condition : TimeOut Condition Primary Option Timeout Send Wait 0 0 Retry 5 0 Comm. 			Apply Close

Items	Settings	Remarks
Interface	Select "Serial".	Refer to "2. External
Protocol	Select "TOHO Protocol".	device selection".
TimeOut (ms)	Set the time for the TOP to wait for a response from an external device.	
SendWait (ms)	Set the waiting time between TOP's receiving a response from an external device	
	and sending the next command request.	
Comm. Address	Set the external device communication address (prefix).	

3.2. Communication setting in TOP

* This is a setting method when "Use HMI Setup" in the setting items in "3.1 TOP Design Studio" is not checked.

■ Touch the top of the TOP screen and drag it down. Touch "EXIT" in the pop-up window to go to the main screen.

(1) Communication interface setting

■ [Main screen > Control panel > Serial]

Items	ТОР	External device	Remarks
Signal Level (port)	RS-485	RS-485	Fixed
Baud Rate	9600		
Data Bit	8		
Stop Bit	2		
Parity Bit	None.		

* The above settings are setting examples recommended by the company.

Items	Description
Signal Level	Select the serial communication method between the TOP and an external device.
Baud Rate	Select the serial communication speed between the TOP and an external device.
Data Bit	Select the serial communication data bit between the TOP and an external device.
Stop Bit	Select the serial communication stop bit between the TOP and an external device.
Parity Bit	Select the serial communication parity bit check method between the TOP and an external device.

(2) Communication option setting

■ [Main screen > Control panel > PLC]

	Ö	PLC	×

SendWait (ms)	Set the waiting time between TOP's receiving a response from an external device and	
	sending the next command request.	
Comm. Address	Set the external device communication address (prefix).	

3.3 Communication diagnostics

■ Check the interface setting status between the TOP and an external device.

- Touch the top of the TOP screen and drag it down. Touch "EXIT" in the pop-up window to go to the main screen.
- Check if the COM port settings you want to use in [Control Panel > Serial] are the same as those of the external device.
- Diagnosis of whether the port communication is normal or not
- Touch "Communication diagnostics" in [Control Panel > PLC].
- The Diagnostics dialog box pops up on the screen and determines the diagnostic status.

ОК	Communication setting normal
Time Out Error	Communication setting abnormal
	- Check the cable, TOP, and external device setting status. (Reference: Communication diagnostics sheet)

Communication diagnostics sheet

- If there is a problem with the communication connection with an external terminal, please check the settings in the sheet below.

Items	Contents		Check		Remarks

					vendor's manual.)	

4. External device setting

The communication setting method of TTM-000 Series is as follows.

For details, refer to the manufacturer's user manual.

Read, Write communication (RW)

r۲

5. Cable table

This chapter introduces a cable diagram for normal communication between the TOP and the corresponding device. (The cable diagram described in this section may differ from the recommendations of "TOHO Electronics Inc.".)

RS-485 (1:1 connection)

*Note 1) The pin arrangement is as seen from the connecting side of the cable connection connector.

■ **RS-485** (1:1 connection)

СОМ			TTM-000		
Din arrangement	Signal	Cable connection	Signal		
Pin arrangement	name		name		
	+		+		
	-		-		
SG	SG				
0 1 -					
0					
J					

RS-485 1 : N - Refer to 1:1 connection to connect in the following method.

TOP	Cable connection and signal	TTM-000	Cable connection and signal	TTM-000
Signal name	direction	Signal name	direction	Signal name
+		+		+
-		-		-

6. Supported addresses

The devices available in TOP are as follows:

The device range (address) may differ depending on the CPU module series/type. The TOP series supports the maximum address range used by the external device series. Please refer to each CPU module user manual and be take caution to not deviate from the address range supported by the device you want to use.

Device	Name	Bit address	Word address	Read/Write	Remarks
PV1	Measures (PV)		PV1	Read	
SV1	Measures (SV)	SV1.00 ~ SV1.15	SV1	Read/Write	*Note 1)
